

AQUATRO

Aquatro fish flakes constitute a complete and balanced meal formulated to meet the nutritional requirements of all aquarium fish, including:

- Uprturned mouth surface feeders as the flakes float for a while.
- Mid water feeders as the flakes slowly sink to the bottom.
- Bottom feeders (mouth on the underside) as flakes eventually come to rest at the bottom.

Produced from selected raw materials, **Aquatro** will promote the healthy growth and vitality of your fish. **Aquatro** formula also contains dyes that will not colour your aquarium water.

Specifications of Aquatro:

Ingredients:

Fish and fish derivatives, Krill meal, Squid meal, fish oil, Soya bean meal, wheat flour, Vitamins and Minerals, permitted antioxidants, yeast, lecithin, binder, preservatives, and dyes.

Nutritional composition of Aquatro fish flakes:

Crude protein	35% (min.)	Moisture	(max.) 4%
Crude fat	12% (min.)	Vitamin specifications:	
Crude fibre	3% (max.)	Vitamin A	(min.) 8000 UI
Ash	10% (max.)	Vitamin C	(min.) 100 UI
Phosphorus	0.7%(min.)	Vitamin D	(min.) 2500 UI
Calcium	2% (max.)	Vitamin E	(min.) 400 UI

Feeding recommendations:

- Sprinkle a pinch of **Aquatro** across the top of the water and observe the consumption rate of the feeders.
- The amount of food to be distributed should be assessed by observation. If the food is eaten within approximately 5 minutes, some more food can be added. The fish usually stop eating once they are full.
- Caution: Overfeeding of the fish is not recommended as uneaten food will decompose and pollute the water. If uneaten feed is visible, the amount of food distributed should be gradually decreased.
- Most fish should be fed 2 or 3 times/day or at least once in the morning and once in the evening.
